

A Right Regular Square pyramid edge of base 35 mm and height 50 mm rest on its base on HP with its base edges equally inclined to VP. A section plane perpendicular to VP and inclined to the HP at 32° . Cut the pyramid bisecting its axis. Draw the front view, sectional top view, sectional left hand side view and true shape of the section of the truncated pyramid.

Given data,

Type of solid - Square pyramid.

base edge - 35 mm

height - 50 mm

rest on its base in H.P

edges are equally inclined to VP

It is cut by section plane L

Problem 2: A cone of 50 mm diameter base and 56 mm length of axis is resting on its base on HP. It is cut by an A.P. which passes through a point 24 mm from the apex along the extreme right generator of the cone and containing the extreme left point of the base circle also. Draw the sectional top view, front view and the true shape of the section.

Prob 3: A hexagonal pyramid, base 30 mm side and axis 60 mm long is resting on its base on the H.P. with two edges of the base parallel to the VP. It is cut by a section plane perpendicular to VP and inclined to the HP intersecting the axis at a point 25 mm above the base. Draw the front view, sectional top view, sectional side view and true shape of the section.

Prob 4: A cone, diameter of base 60 mm and axis 70 mm long, is lying on HP on one of its generators with its axis parallel to VP. A vertical section plane parallel to the generator, which is tangent to the ellipse for the base in the top view, cuts the cone bisecting the axis and removing the portion containing the apex. Draw its sectional front view and true shape of the section.

X.Y. Draw at any suitable position to avoid overlapping of views.
